

Fer el desplegament de WordPress

Description

Primer he iniciat l'entorn de servidor i he comprovat que els serveis necessaris, i anem a requeriments.

Després he accedit al lloc web de WordPress des del navegador i he comprovat que la pàgina principal es carregava correctament.

A continuació, he accedit al panell d'administració mitjançant **wp-admin** i he iniciat sessió amb el meu compte d'administrador.

Un cop dins del **Dashboard**, he comprovat que podia accedir a les diferents opcions d'administració de WordPress.

També he accedit a **Tools Site Health Status** per comprovar l'estat general del lloc web i verificar que WordPress funcionava correctament.

Finalment, he tornat a la pàgina principal del lloc web i he comprovat que era accessible i que els continguts es mostraven correctament.

About

Requirements

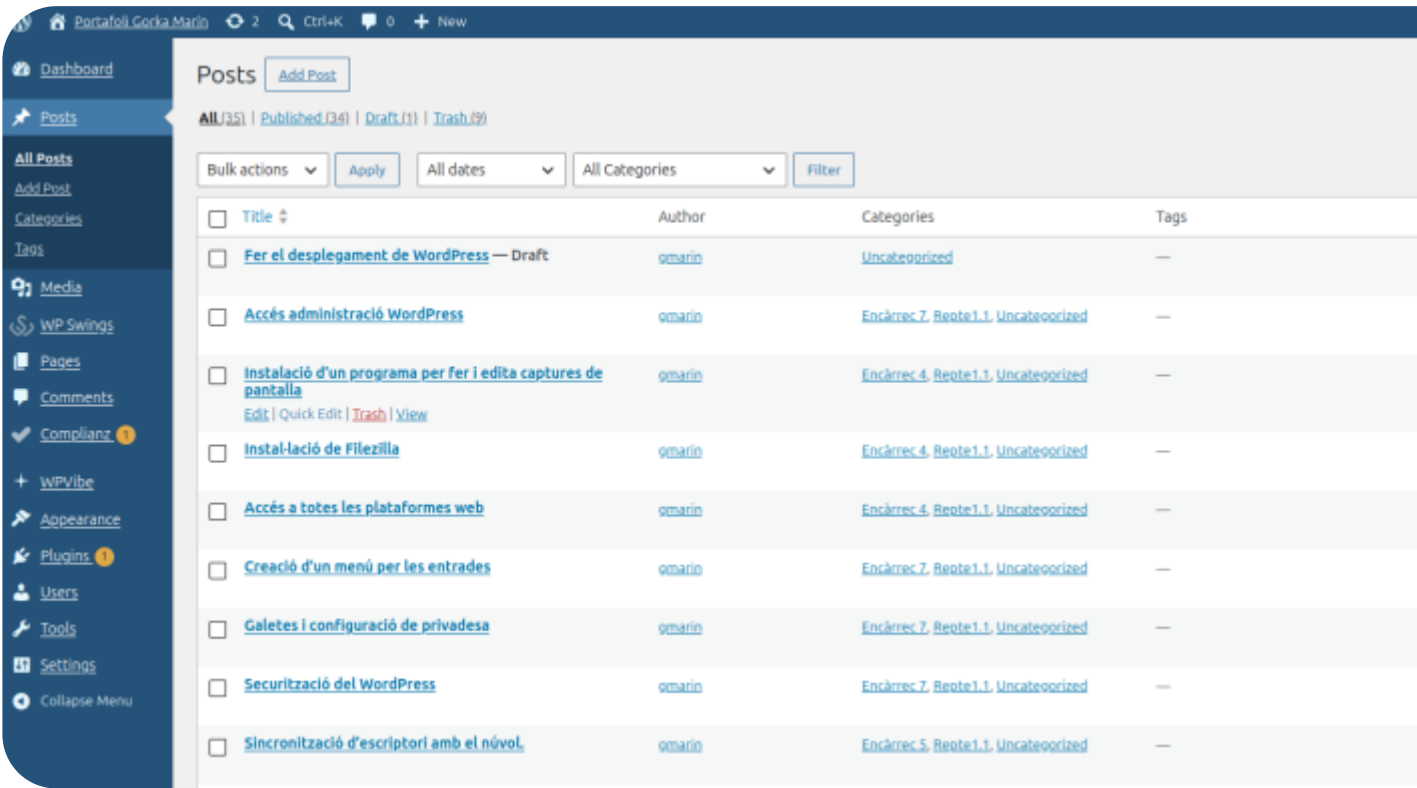

To run WordPress, it's recommended your host supports:

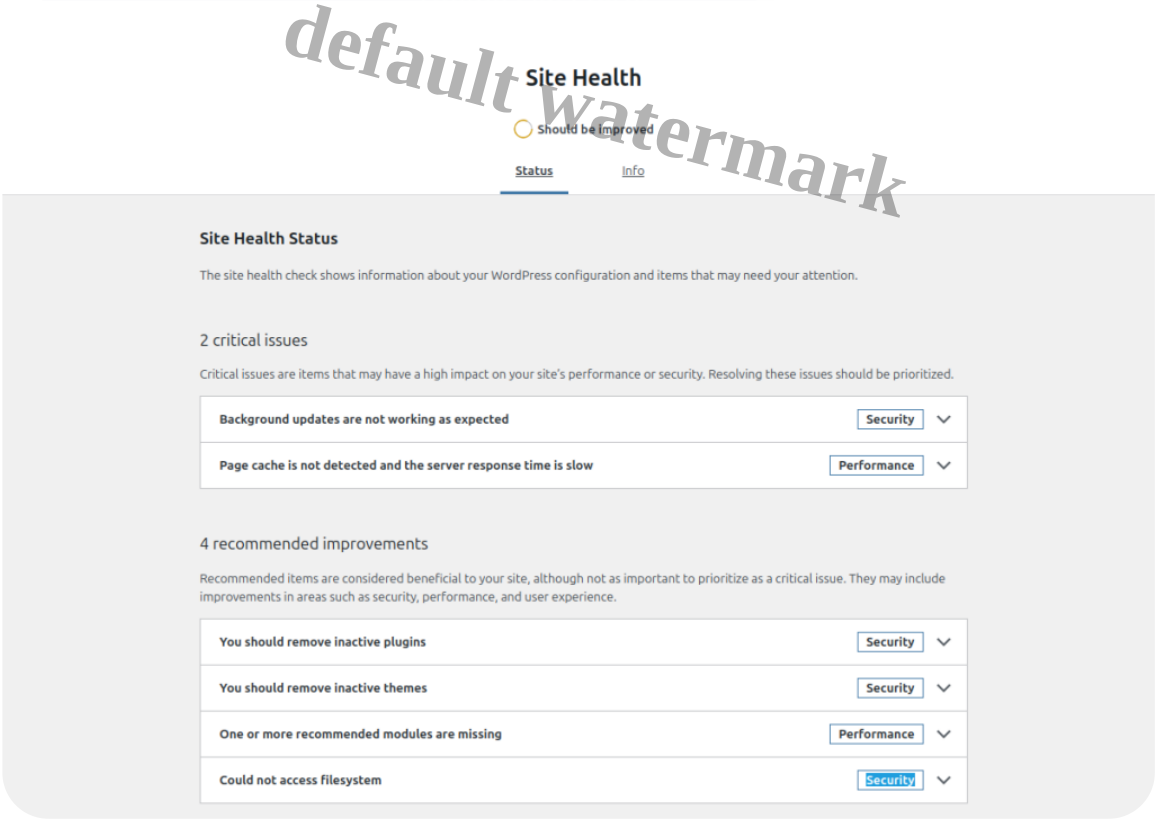

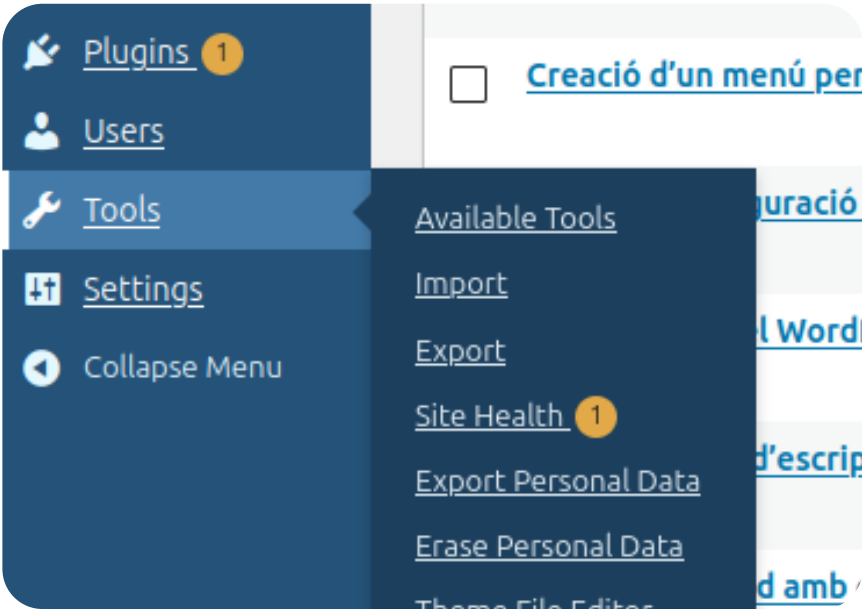

- [PHP](#) version 8.3 or greater.
- [MariaDB](#) version 10.11 or greater OR [MySQL](#) version 8.0 or greater.
- [HTTPS](#) support

That's really it. [Apache](#) or [Nginx](#) is recommended as the most robust and featureful server for running WordPress, but any server that supports PHP and MySQL will do. That said, for the smoothest experience in setting up—and running—your site, [each host on the hosting page](#) supports the above and more with no problems.

For detailed PHP extension recommendations, see the [Hosting Handbook](#).

Notes: If you are in a legacy environment where you only have older PHP or MySQL versions, WordPress also works with PHP 7.4+ and MySQL 5.5.5+. However, these versions have reached their official End Of Life and **may expose your site to security vulnerabilities**.
